Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Enzyme EPSH involved in exopolysaccharide blosynthesis.

Exopolysaccharide; EPS; ESP enzyme; EPSA; EPSB; EPSB; EPSD; EPSF; EPSG; EPSH; EPSJ; EPSJ; EPSK; Lactobacillus delbrueckii buigaricus; activated D-galactose pyranose; saccharide, beta-glycosyltransferase; transcription attenuator; glucosyl-phospho-transferase; alpha-glycosyltransferase; glucosyltransferase; EPSL; EPSM; alpha-glycosyltransferase; EPS Dolymerase; glycosyltransferase; EPS polymerase; glycosyltransferase; EPSN; phosphofuranose; transporter; food; fermented milk product; yoghurt; cheese; flavour stability; organoleptic property. THE STATE OF THE S

Lactobacillus delbrueckii bulgaricus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                          exopolysaccharides (ERS). These energyes are designated EPSA-EPSN, and are encoded by open reading frames epsA-epsN. The enzymes are isolated from Lactobacillus delbrueckii bulgaricus. The proteins are used in a method for the synthesis of EPS, which includes at least one step of forming a bond (alpha or beta-isomer) between C-1 (carrying the reducing aldebyde function, of an activated D-galactose pyranose), and a phosphate on a lipophilic or proteinaceous primer. Stepwise synthesis of EPS occurs with, in each step, addition of a new sugar unit, through its hemi-acetyl function, to an alcoholic hydroxyl of a second sugar unit, present at the end of a chain of sugar residues bonded to the primer. EPSA is attenuator of transcription which influences for involved in the control of the molecular weight and/or the length of the could play saccharide; EPSD, EPSL and EPSM are involved in synthesis of EPS in involved in the first saccharide on the primer; EPSF and EPSR are involved in synthesis of the captage of placosyl-phospho-transferase which catalyses the transfer of the first saccharide on the primer; EPSF and EPSR is capha-glucosyltransferases; EPSG as a glucosyltransferase; EPSG is a glucosyltransferase; EPSK is capha-glucosyltransferases; EPSG is a glucosyltransferase; EPSK is cresponsible for the polymerisation of the repetitive units; and EPSN is responsible for export of the EPS. The EPS enzyme are used to improve properties of foods, particularly fermented milk products such as yophurt and cheese, e.g. their organoleptic properties and flavour stability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 KILLNEENIGLASSLNKAVKISKGEYIFRMDADDISYPSRFDKQIRFMEEN-SLDFSATL 119

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel polynucleotides derived from Coryneform bacteria, for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ochiai K, Yokoi H;
                                                                                                                                                                                                                                                                                      Coryneform bacterium; amino acid synthesis; vitamin; saccharide; organic acid synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 17; SEQ ID NO: 3905; 246pp + Sequence Listing; English.

are useful for synthesising simplates of a staryment of staryment of staryments of staryments of oligosaccharides useful for chemo-enzymatic synthesis of oligosaccharides, are useful for chemo-enzymatic synthesis of oligosaccharides, including gangliosides and other oligosaccharides that have biological activity. The enzymes and nucleic acids that encode them are useful for studies of the pathogenesis mechanisms of organisms that synthesize ganglioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of genes involved in ganglioside mimetic synthesis. Antibodies raised against the glycosyltransferases are also useful for analyzing the expression patterns of these genes involved in pathogenesis. The nucleic acids are also useful for designing antisense oligonucleotides for inhibiting expression of the Campylobacter cancer are involved in the biosynthesis of ganglioside mimics that can mask the pathogens from the host's immune system. The oligosaccharides are useful as diagnosing reagents or as therapeutics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel glycosyltransferase polypeptides and polynucleotides useful for biosynthesis of ganglioside and ganglioside mimics, as diagnostic reagents and as immunogen for producing antibodies
                                                                                                                                                                                       acetyltransferase; glycosyltransferase; Beta-1,4-GalNAc transferase; Beta-1,3-galactosyltransferase; alpha-2,3-sialyltransferase; sialic acid synthase; CMP-sialic acid synthetase; mimic; antibody; immunogen; ganglioside.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A reaction mixture for the synthesis of a sialylated oligosaccharide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                and as immunogens for producing antibodies. Bacterial glycosyltransferase can be used to catalyse the formation of oligosaccharides that are identical to the corresponding mammalian structures and are easier and less expensive to produce in large quantity, compared to the mammalian glycosyltransferase. The

                                                                                          The proteins AAY68982-85 are encoded by the capsular gene cluster of Streptococcus suis serotype 7. The genes in this cluster are involved in polysacoharide biosynthesis of capsular components and antigens. The capsule confers bacterium resistance to complement-mediated opsonophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for recombinant production of the proteins. The proteins are then useful for producing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease, in humans or animals, e.g. against S. suis in pigs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             124 DQKGNLVYKQRESNKIYLTND---IRKMLLNRSILAHPTWCVKKKVFDKLMGYRDLVPVE 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Q
                                                                         The Invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are scherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibloitics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruqinosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets in antibiotic development. The antisense nucleic acids can also be used to dentify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins.

The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in essential prokaryotic cellular proliferation protein.

Which is a sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        64 LNEENIGLASSLNKAVKISKGEYIFRMDADDISYPSRFDKQIRFMEEN-SLDFSATLIEL 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     245 freqnghiseatnsalaiatgefvalldnddelainafyevvkvlnenpeldliysdedk 304
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ydlvlrftekttkerithipkvlyywrmlptstavdggskgyafeaglravgdalvrrg1 417

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     encoded by the wbdN open reading frame of a gene cluster (see AxCoff49) involved in the biosynthesis of the Escherichia coli 0157 o antigen. The use of nucleic acid molecules derived from particular assembly and transport genes, particularly wbd (transferase), wax (flippase) and way (polymerase) genes, within o antigen gene clusters improves the specificity of methods for the detection and identification of 0 antigens, e.g. in testing foodor facecal-derived samples, or samples from patients. The O antigen is a major virulence factor of enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic colitis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The proteins AAY68977-81 are encoded by the capsular gene cluster of Streptococcus suis serctype 9. The genes in this cluster are involved in polysaccharide biosynthesis of capsular components and antigens. The proteins have glycosyltransferase activities (Cps9E, Cps9F) and unknown functions (Cps9D, CpsG, Cps9H). The capsule confers bacterium resistance to complement-mediated opsonophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for recombinant production of the proteins. The proteins are then useful for producing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease, in humans or animals,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid containing the capsular gene cluster of Streptococcus suis, used for serotype-specific detection and to generate antigens or mutants for vaccination

Glycosyltransferase LgtA (AAR91311) can be obtd. by expression of the lgtA coding sequence in recombinant host cells. A method for adding GalNAc or GloNAc betal-3 to Gal comprises contacting a reaction mixture contg. activated GalNAc or GloNac to an acceptor moiety comprising a Gal residue in the presence of LgtA. Oligosaccharides can be produced that, when attached to non-toxic lipids, are useful for Neisserla waccine prepn. Blood group core oligosaccharides, and mimics of lacto-N-neotetranse, gangliosides and saccharides, and globoglycolipids can also be produced using the enzymes.

It is the first PGTase reported to be capable of transfer of more than one different saccharide moiety. The PGTase is encoded by nucleotides 445-1488 of a lipo-oligosaccharide gene

The proteins AAY68970-76 are encoded by the capsular gene cluster of Streptococcus suis serotype 1. The genes in this cluster are involved in polysaccharide biosynthesis of capsular components and antigens. The proteins have glycosyltransferase activities (CpsIE, CpsIG, CpsII, CpsIJ, CpsII, and CP polymerase activities (CpsIH). The capsule confers bacterium resistance to complement mediated opsonophagocytosis. The serotype-specific detection of S. suis and is also useful for recombinant production of S. suis and is also useful for recombinant production of the proteins. The proteins are then useful for producting a Streptococcal disease, in humans or animals, e.g. suis in pigs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    64 LNEENIGLASSLNKAVKISKGEYIFRMDADDISYPSRFDKQIRFMEENSLDFSATLIE-- 121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               11;
                                                                                                                                                                                                                               is useful for synthesising simplified oligosaccharide such as grantloside, lysoganglioside or their mimics. Glycosyltransferases are useful for chemo-enzymatic synthesis of oligosaccharides, concluding gangliosides and other oligosaccharides that have biological activity. The enzymes and nucleic acids that encode them are useful for studies of the pathogenesis mechanisms of organisms that synthesize ganglioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of genes involved in ganglioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of genes involved in ganglioside mimics, such as C. jejuni and the cupted sign patterns of these genes involved in pathogenesis. The culticactide are also useful for designing antisense oligonucleotides for inhibiting expression of the Campylobacter contact acids are also useful for designing antisense oligonucleotides for inhibiting expression of the Campylobacter cargines that are involved in the biosynthesis of ganglioside mimics that can mask the pathogens from the host's immune system. The oligosaccharides are useful as diagnosing pageance are useful as diagnosing pageance.
                                                                                                                       Novel glycosyltransferase polypeptides and polynucleotides useful for blosynthesis of ganglioside and ganglioside mimics, as diagnostic reagents and as immunogen for producing antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     122 LIDQKGNLVYKQRESNKIYLTNDIRKMLLNRSILAHPTW--CVKK----KVFDKLMGYRD 175

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and as immunoses are useful as diagnosing reagents or as therapeuti and as immunogens for producing antibodies. Bacterial glycosyltransferase can be used to catalyse the formation of oligosaccharides that are identical to the corresponding mammalian structures and are easier and less expensive to produce in large quantity, compared to the mammalian glycosyltransferase. The bacterial origin of the enzymes facilitates expression of large expression systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               12.6%; Score 200; DB 21; Length 270; 26.8%; Pred. The present invention relates to the genomic sequence of Pyrococcus abyssi (see AAF86431 and AAH41223-7) and P. abyssi proteins. P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 110 degrees centigrade.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      122 LIDQKGNLVYKQRESNKIYLTNDIRKMLLNRSILAHPTWCVKKKVFDKLMGYRD--LVPV 179
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  64 LNEENIGLASSLNKAVKISKGEYIFRMDADDISYPSRFDKQIRFMEENSLDFSATL--IE 121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           123 yvsqdgrilgkrlpkhr----gdiyshllkenfigsptllirrecfkk-aglfdprlsss 177
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: This patent is in the same patent family as WO200065062, which contains additional sequences as shown in AAB99132-AAB99143, AAH75903-AAH75920 and AAG66436.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   4 SIIMSVYNEPLNYVRDSVESILNQTLTDFEFIIVIDNPSRGDLKQFLTEYSVVDNRIKIL 63
                                                         Putative glycosyltransferase, involved in cell wall biogenesis #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleotide sequences isolated from Pyrococcus abyssi encode proteins useful in industry -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               16;

Lamothe G;

AAY54086-99 represent enzymes involved in the biosynthesis of exopolysaccharides (EBS). These enzymes are designated EPSA-EPSN, and are encoded by open reading frames epsa-epsN. The enzymes are isolated from Lactobacillus delbrueckii bulgarius. The proteins are used of from ing a bond (alpha or beta-isomer) between C-1 (carrying the reducing aldehyde function, of an activated D-galactose pyranose), and a phosphate on a lipophilic or proteinaceous primer. Stepwise synthesis of ESS occurs with, in each step, addition of a new sugar unit, through its hami-acetyl function, to an alcoholic hydroxyl of a second sugar unit, present at the end of a chain of sugar residues bonded to the primer. EPSA is attenuator of transcription which influences primer. EPSA is attenuator of transcription which influences regulation; EPSB determines the length of the saccharide chain; EPSC is involved in the control of the molecular weight and/or the length of the polysaccharide; EPSD, EPSL and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved in Synthesis of EPSL; encoding and EPSM are involved and Synthesis of EPSL; encoding and EPSE is a glactosy or glucosyl-phospho-transferase which catalyses the transfer of the first saccharide on the primer: EPSF and EPSG are alpha-glycosyltransferases; EPSG is a glucosyltransferase; EPSG is a glucosyltransferase; EPSK is responsible for the polymerisation of the repetitive units; and EPSN is responsible for export of the EPS. The EPS enzyme are used to improve properties of foods, particularly fermented milk products such as yoquurt ond cheese, e.g. their organoleptic properties and flavour stability. New recombinant enzymes for synthesis of exopolysaccharides, particularly in lactic acid bacteria, for improving properties of Example 18; Page 156-157; 162pp; French fermented milk products 327 AA; Sequence
